# Work Boot Traction

**For hassle-free footwear safety**

Easily transform work boots with Grip Studs® to secure traction in wet, snowy, and icy job conditions. Patented screw-in, wide-angled thread design prevents Grip Studs® from working their way into or out of boot soles.

Reduced-spark carbide core/tip ensures durable performance, reduces safety hazards, and helps extend the life of the sole. Preferred by workers over crampons — no straps or buckles, no misplacing, no interference with driving, and no breakage. High- or low-profile models available to match the predominate type of terrain. Easily installed in boot soles manually or with variable speed drill. No pre-drilling or gluing necessary. See you on the job — where safety stands strong!

## RECOMMENDED APPLICATION

### Low-profile Model #1100

Prominence from sole 1.9mm

Penetration into sole 7.9mm

Recommended per sole 14 studs

Application: Ice, frozen pavement, and other hard, slippery surfaces
